

PRITAM BISWAS

App & Web Developer | AI Explorer | Competitive Programmer

Dhaka, Bangladesh | pritam020s2@gmail.com | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

SUMMARY

Second-year CSE undergraduate (B.Tech, expected graduation 2028) who has already shipped four production-grade, AI-integrated products before finishing a formal internship — a multilingual GPT-4o support agent live across 18 languages including native Bangla/Banglish, a full-stack finance app with an embedded AI assistant, a native Android app that reads scanned class routines with Gemini Vision, and a government-recognized civic-engagement platform.

Every project was built solo, end-to-end — architecture, Git-based version control, debugging, and interface — which is exactly the self-directed instinct CSE-TECH's Skill Hunt is designed to channel into disciplined, Agile, team-based engineering. Actively competing on LeetCode and Codeforces, three-time institutional science fair winner. Looking for a program willing to bet on a builder who already ships — because that bet rarely comes around twice.

EDUCATION

B.Tech, Computer Science & Engineering

Daffodil International University — Dhaka, Bangladesh | 2nd Year | Expected Graduation: 2028

TECHNICAL SKILLS

- **Core:** Python, JavaScript/TypeScript, Java, React, Node.js/Express
- **Also using:** Kotlin, Jetpack Compose, Spring Boot, Tailwind CSS, HTML/CSS, C
- **Engineering Practices:** Git/GitHub version control, debugging, CRUD architecture, role-based access design, REST APIs
- **AI & Automation:** GPT-4o & Gemini API integration, n8n workflow automation, K-Means clustering & PCA
- **Tools & Platforms:** VS Code, Android Studio, MySQL, Linux

PROJECTS

BhashaBot — AI Multilingual Messenger Auto-Reply ([repo](#)) | 2026–Present

- Automated Facebook Messenger support with an n8n workflow that detects customer language across 18 languages — including native Bangla/Banglish — using a single GPT-4o call to return reply, sentiment, intent, lead data, and a human-handoff flag.
- Designed a one-webhook, one-decision-point architecture that auto-routes refunds, complaints, and emergencies to a human instead of an AI-generated response.

Takar Hisab — Full-Stack Student Finance Tracker ([repo](#)) | 2026

- Built a React + TypeScript + Node.js/Express finance app with expense/income tracking, an EMI/loan calculator, a bill-splitter, live currency conversion, and a conversational AI budget assistant powered by Gemini.
- Implemented offline-first localStorage persistence with a server-side AI proxy and CSV/JSON export-import.

DIU Routine — Offline Android Class Scheduler ([repo](#)) | 2026

- Built a native Kotlin/Jetpack Compose Android app that scans uploaded routine PDFs/DOCX with Gemini Vision to auto-extract dates, times, rooms, and course codes into a fully offline timetable.
- Added smart pre-class reminders and on-device attendance/study-streak tracking using Room for local persistence.

Nagorik Setu (OpenGovtBD) — Government–Citizen Engagement Platform ([repo](#)) | 2025–2026

- Built a role-based civic platform (React, TypeScript, Vite, Tailwind) with three distinct dashboards — Citizen, Officer, Super Admin — for complaints, civic polls, discussions, and an e-services directory.
- Shipped a full bilingual (English/বাংলা) UI and a Ctrl+K command palette for instant cross-role navigation.

Additional Projects: Student Management System (Python/Java) | Movie Ticket System (Python/Java)

- Built a Python/Java CRUD student-records system with role-based access, and a Python/Java movie-ticket platform with seat-selection and booking-conflict logic.

ACHIEVEMENTS & COMPETITIVE PROGRAMMING

- 1st Place, Institutional Science Fair — 3 consecutive years
- Government of Bangladesh — National Science Fair Certificate of Recognition; Digital Bangladesh Certificate; multiple government-issued civic/academic participation certificates

LeetCode: [Pritam_002](#) Codeforces: [Pritam-580](#)
